

**origin** which points to your GitHub fork of the project.

**upstream** which points to the main project's GitHub repo.

```
1. git remote add upstream https://github.com/ashutoshtanwar1/IOSD-NSUT-Website.git
2. git checkout master
3. git pull upstream master
4. git push origin master
```

1. **git remote** will add the remote to the upstream branch.
2. **git checkout** will ensure that you are on origin branch.
3. Then the **git pull** command will sync our local copy with the upstream project.
4. **git push** will push the changes to the origin branch.

Then you have to Create the PR.
